

New Requirements for Industrial Fans

ErP Regulation (EU) 2024/1834

From 24 July 2026, new ecodesign requirements will apply to industrial fans. In future, the entire fan solution will be assessed holistically – from efficiency, performance data and documentation through to clearly defined responsibilities.

The new requirements therefore affect not only fan manufacturers. Plant manufacturers, equipment manufacturers, importers and operators should also assess at an early stage how their projects may be affected.

What matters now:

- 1 **Does the new regulation apply to your fans?**
- 2 **Is a complete fan or an individual component being supplied?**
- 3 **Who is responsible for completing the entire fan solution?**
- 4 **Are all the required technical data and documents available?**
- 5 **Is the project a new installation, a replacement or a retrofit?**

**Already checked?
Get expert advice now!**

More clarity for your project!

Early coordination provides greater planning certainty and helps to avoid additional modifications, documentation requirements or delays during the course of the project. We support you with an initial assessment and work with you to determine which requirements are relevant to your fan solution:

- | | |
|--------------------------------------|---|
| ✓ Application & operating conditions | ✓ Technical performance data |
| ✓ Fan selection & system boundaries | ✓ New installation, replacement or retrofit project |
| ✓ Scope of supply & responsibilities | ✓ Documentation & conformity evidence |
